

Explosive Test Kit

(Dry Explosive Test Kit)

Step by Step

The Explosive Test Kit (ETK) is a 100% recyclable paper based colour test. It contains a solvent swab which is used to sample suspect residues and then applied to the three miniature colour tests to rapidly detect all classes of threat items, including hydrogen peroxide, chlorates, nitrates, nitro-amines, nitro-esters and nitro-aromatics.

The ETK are packaged in boxes of 200 kits. The ETK contains one pre-wetted swab and one individually wrapped test card with all instructions for use provided with each kit. Used kits and packaging can be placed in any paper based recycling system.
