

Liquid Explosive Test Kit

Step by Step

The Liquid Explosive Test Kit (LETK) is 100% recyclable paper based colour test. It applies the same innovative technology. Using the supplied sterile dry swab, any liquid may be sampled and applied to the five miniature colour tests for instant detection of virtually every known threat liquid, both commercial and clandestine.

The LETK are packaged in boxes of 200 kits. The LETK contains one dry swab and one individually wrapped test card with all instructions for use provided with each kit. Used kits and packaging can be placed in any paper based recycling system.
